Slide Creation Task Division

AquaTrack Rwanda - Technical Progress Presentation Deck

Each slide is assigned to one owner who builds it directly in the shared Canva project. Ange sets up the Canva project, shares the link with all 4 members, and reviews consistency before the final export. Presentation is 7 minutes + 3 minutes Q&A.

Slide Count per Member

Member	Role	Slides Owned
Ange Umukundwa	Project Manager & UI/UX Lead	1, 3, 9, 13, 14, 16 (6 slides)
Merci Dieu Ndekwe	Lead Developer & Database Architect	4, 6, 7 (3 slides - features & database)
Luigi Birasa Ntore	Research Lead & Literature Reviewer	2, 5, 8, 12, 15 (5 slides - backend & challenges)
Joseph Enitan Oke	Frontend Developer & QA Lead	10, 11, 12* (3 slides - frontend & testing)

** Slide 12 (Technical Challenges) is owned by Luigi; Joseph contributes testing evidence to Slide 11.*

Slide-by-Slide Build Assignments

16 slides for a 7-minute talk (~26 seconds per slide). Build directly in the shared Canva project using the agreed black-and-white template. One clear visual (diagram, table, code snippet, or screenshot) per slide where possible.

#	Slide Title	Rubric Section	Owner	Must Include
1	Title Slide	-	Ange	Project name, all 4 team member names + roles, date, Group 6.
2	Problem Statement	Project Overview	Luigi	44% NRW loss stat, billing transparency gap, citizen reporting gap. 1-2 data figures.
3	Proposed Solution	Project Overview	Ange	AquaTrack one-line pitch + 3 core capabilities: anomaly detection, dashboard, SMS module.
4	Features: Planned vs Implemented	Implemented Features	Merci	Checklist or table: feature name, status (Done / In Progress / Planned).
5	Tool Justification	Implemented Features	Luigi	Django vs Flask/Node.js table; HTML/CSS/JS for frontend; PostgreSQL vs MySQL. Explain why each was chosen.
6	Database Schema (ERD)	Database & Data Management	Merci	ERD image: all 5 tables with columns and relationship lines.
7	Data Storage & Security	Database & Data Management	Merci	PostgreSQL rationale; indexing on household_id/timestamp; role-based access control.
8	System Architecture Diagram	System Architecture	Luigi	3-tier diagram: Input Layer / Django Processing Engine / Output Layer (dashboards + SMS).
9	Architecture Pattern & Scalability	System Architecture	Ange	Layered architecture rationale; scalability path from Gasabo pilot (50 households) to 30 districts.
10	Frontend Implementation	Code Quality & Testing	Joseph	Screenshots of HTML/CSS/JS pages built so far (citizen dashboard + WASAC dashboard). State what is functional.
11	Coding Standards & Testing	Code Quality & Testing	Joseph	PEP8 for Python; ESLint for JavaScript; pytest/Django TestCase snippet; sample test result.
12	Technical Challenges & Solutions	Technical Challenges	Luigi	2 challenges (e.g. realistic meter data simulation, SMS accessibility for feature phones); solution + effectiveness.
13	Feedback Integration	Feedback Integration	Ange	Summary of prior feedback received; concrete changes made in response (e.g. scope narrowed, SMS-first design).
14	Next Technical Steps	Next Technical Steps	Ange	Upcoming milestones with owner names and target dates.
15	References	-	Luigi	All cited libraries, APIs, and academic sources in APA style (from the project proposal reference list).
16	Thank You / Q&A	-	Ange	GitHub repo link, team contact, open the floor for questions.

Timing Breakdown (7 minutes)

Speaker	Slides	Content	Time
Luigi	2	Problem Statement	0.5 min
Ange	3	Proposed Solution	0.5 min
Merci	4	Features: Planned vs Implemented	0.5 min
Merci	6, 7	Database Schema & Data Security	1.0 min
Luigi	5, 8	Tool Justification & Architecture	1.0 min
Ange	9	Architecture Pattern & Scalability	0.5 min
Joseph	10, 11	Frontend & Coding Standards/Testing	1.0 min
Luigi	12	Technical Challenges & Solutions	0.5 min
Ange	13, 14	Feedback + Next Steps	0.5 min

Slides 1 (Title) and 15-16 (References, Q&A) are shown but not timed in the talk.

Build Checklist

[ ] Ange creates the Canva project with the black-and-white template and shares the link with all 4 members.

[ ] Each member builds their assigned slides directly in Canva by the agreed internal deadline.

[ ] All diagrams (ERD, architecture) are exported from draw.io/Lucidchart and inserted as clear images.

[ ] Code snippets are pasted as formatted text or syntax-highlighted images, not blurry screenshots.

[ ] Luigi compiles the References slide (Slide 15) from the project proposal reference list.

[ ] Ange reviews all slides: consistent font, spacing, and layout before export.

[ ] Full team rehearsal: time the run-through, confirm it fits 7 minutes.

[ ] Export the final Canva deck to PDF as a backup for presentation day.
