

Slide Creation Task Division

AquaTrack Rwanda - Technical Progress Presentation Deck

Each speaker presents their slides in one consecutive block then hands off. Slides 1 (Title), 15 (References), and 16 (Q&A) are displayed but do not require a dedicated presenter. Ange sets up the Canva project and reviews consistency before the final export. Presentation is 7 minutes + 3 minutes Q&A.

Presenting Slides per Member (excludes Title, References, Q&A)

Member	Role	Presenting Slides	Count
Ange Umukundwa	Project Manager & UI/UX Lead	2, 3, 4	3 slides
Merci Dieu Ndekwe	Lead Developer & Database Architect	5, 6, 7, 8	4 slides
Luigi Birasa Ntore	Research Lead & Literature Reviewer	9, 10, 11	3 slides
Joseph Enitan Oke	Frontend Developer & QA Lead	12, 13, 14	3 slides

Slide 1 (Title) is shown by Ange while introducing the team. Slide 15 (References) is shown by Joseph after his last slide. Slide 16 (Thank You / Q&A) is shown by Ange to close the session.

Slide-by-Slide Build Assignments

Slides are ordered by speaking block. Each presenter builds their own slides in Canva and speaks them in one go before handing off to the next person.

#	Slide Title	Rubric Section	Owner	Must Include
1	Title Slide	-	Ange*	Project name, all 4 team member names + roles, date, Group 6.
2	Problem Statement	Project Overview	Ange	44% NRW loss stat, billing transparency gap, citizen reporting gap. 1-2 data figures.
3	Proposed Solution	Project Overview	Ange	AquaTrack one-line pitch + 3 core capabilities: anomaly detection, dashboard, SMS module.
4	Feedback Integration	Feedback Integration	Ange	Summary of prior feedback received; concrete changes made in response (e.g. scope narrowed, SMS-first design).
5	Features: Planned vs Implemented	Implemented Features	Merci	Checklist or table: feature name, status (Done / In Progress / Planned).
6	Tool Justification	Implemented Features	Merci	Backend framework comparison (options considered and why one was chosen); HTML/CSS/JS rationale for frontend; database engine choice. No code, just rationale.
7	Database Schema (ERD)	Database & Data Management	Merci	ERD image: all 5 tables with columns and relationship lines.
8	Data Storage & Security	Database & Data Management	Merci	Database rationale; indexing strategy on household_id/timestamp; role-based access control.
9	System Architecture Diagram	System Architecture	Luigi	3-tier diagram: Input Layer / Backend Processing Engine / Output Layer (dashboards + SMS).
10	Architecture Pattern & Scalability	System Architecture	Luigi	Layered architecture rationale; scalability path from Gasabo pilot (50 households) to 30 districts.
11	Technical Challenges & Solutions	Technical Challenges	Luigi	2 challenges (e.g. realistic meter data simulation, SMS accessibility for feature phones); solution + effectiveness.
12	Frontend Implementation	Code Quality & Testing	Joseph	Screenshots of HTML/CSS/JS pages built so far (citizen dashboard + WASAC dashboard). State what is functional.
13	Coding Standards & Testing	Code Quality & Testing	Joseph	Coding standards applied (backend + JavaScript); a unit test snippet; sample test result.
14	Next Technical Steps	Next Technical Steps	Joseph	Upcoming milestones with owner names and target dates.
15	References	-	Joseph*	All cited libraries, APIs, and academic sources in APA style (from the project proposal reference list).
16	Thank You / Q&A	-	Ange*	GitHub repo link, team contact, open the floor for questions.

* = shown but not counted as a presenting slot; speaker does not need to prepare remarks.

Speaking Order & Timing (7 minutes)

Speaker	Slides	Content	Time
Ange	2, 3, 4	Problem + Solution + Feedback	1.5 min
Merci	5, 6, 7, 8	Features + Tools + ERD + Data Storage	2.0 min
Luigi	9, 10, 11	Architecture + Patterns + Challenges	1.5 min
Joseph	12, 13, 14	Frontend + Testing + Next Steps	2.0 min

Slides 1 (Title), 15 (References), and 16 (Q&A) are displayed but not included in the 7-minute count. Each speaker finishes their full block before the next person begins.

Build Checklist

- [] Ange creates the Canva project with the black-and-white template and shares the link with all 4 members.
- [] Each member builds their assigned slides directly in Canva by the agreed internal deadline.
- [] All diagrams (ERD, architecture) are exported from draw.io/Lucidchart and inserted as clear images.
- [] Code snippets are pasted as formatted text or syntax-highlighted images, not blurry screenshots.
- [] Joseph compiles the References slide (Slide 15) from the project proposal reference list.
- [] Ange reviews all slides: consistent font, spacing, and layout before export.
- [] Full team rehearsal: run through in speaking order, confirm it fits 7 minutes.
- [] Export the final Canva deck to PDF as a backup for presentation day.
