

Teamwork Report Task Division

AquaTrack Rwanda - Teamwork & Project Management Report

Every member writes one named section of the report directly in the shared Google Doc. Each owner provides their own screenshots and written content. Ange exports the final version to PDF for submission.

Section Ownership at a Glance

Member	Role	Report Section
Ange Umukundwa	Project Manager & UI/UX Lead	Section 1 - Project Management & Collaboration
Merci Dieu Ndekwe	Lead Developer & Database Architect	Section 2 - Database Design
Luigi Birasa Ntore	Research Lead & Literature Reviewer	Section 3 - Backend Development
Joseph Enitan Oke	Frontend Developer & QA Lead	Section 4 - Frontend Development & QA

Section 1 - Project Management & Collaboration | Owner: Ange

Task	What to Write / Provide
Project management tool	Name the tool used (GitHub Projects). Explain how the board columns (To Do / In Progress / Done) helped the team track tasks and who owns what. 3-4 sentences.
PM tool screenshot	Screenshot of the live board with real task cards visible - at least one card per member shown.
Team meeting evidence	Screenshot of at least 1 team meeting (video call or chat) with date and attendees visible.
Collaboration practices	Paragraph covering: how the team communicates day-to-day, Git branching workflow, Google Docs for this report, Canva for the slide deck.
Figma designs	Accessible Figma share-link + screenshot of citizen and WASAC dashboard wireframes. Note: Figma evidence is required in this report only, not in the slide deck.

Section 2 - Database Design | Owner: Merci

Task	What to Write / Provide
ERD screenshot	Clear ERD image covering all 5 tables: households, meter_readings, anomaly_alerts, citizen_reports, sms_notifications. Columns and relationship lines must be readable.
Schema explanation	Written paragraph explaining the key relationships between tables (e.g. how meter_readings links to households, how anomaly_alerts are triggered). 4-6 sentences.
Design decisions	2-3 sentences on why the schema is structured this way - e.g. indexing strategy on household_id and timestamp, and how role-based access control is enforced at the data level.

Section 3 - Backend Development | Owner: Luigi

Task	What to Write / Provide
Project structure screenshot	Screenshot of the backend project folder structure showing the apps/modules layout.
API response sample	Screenshot or code block of a sample API response (e.g. anomaly alert JSON) showing that the backend returns structured data.
Data simulation	Brief explanation and screenshot of the data simulation script - how realistic meter readings are generated for 50+ households. State what values are simulated and why.
Written overview	Short paragraph (4-5 sentences) describing what the backend does: receives meter data, runs anomaly detection rules, exposes API endpoints, sends SMS notifications.

Section 4 - Frontend Development & QA | Owner: Joseph

Task	What to Write / Provide
Frontend screenshots	Screenshots of the HTML/CSS/JS pages built: citizen dashboard (usage chart, bill forecast, issue submission form) and WASAC dashboard (alerts panel, reports, trends). State clearly what is functional vs still in progress.
Written overview	Short paragraph (4-5 sentences) describing the frontend: what pages exist, how they connect to the backend, what the user can do on each page.
Coding standards	2-3 sentences on the standards applied: e.g. consistent naming, file structure, and how JavaScript is organised across the frontend.
Testing evidence	Screenshot or description of at least one test run - unit test output or manual test checklist showing what was verified and whether it passed.
GitHub repository	Screenshot of the commit history showing commits from multiple members. Screenshot of the contributors tab confirming individual coding contributions.

Compilation Checklist | Owner: Ange

- ☐ Ange creates the shared Google Doc and shares the edit link with all 4 members.
- ☐ Ange writes Section 1 (Project Management & Collaboration) including Figma designs.
- ☐ Merci writes Section 2 (Database Design) - ERD screenshot + schema explanation + design decisions.
- ☐ Luigi writes Section 3 (Backend Development) - structure screenshot + API sample + data simulation.
- ☐ Joseph writes Section 4 (Frontend Development & QA) - page screenshots + testing + GitHub evidence.
- ☐ Ange reviews the full doc: every screenshot has a caption, all links are accessible, no section is empty.
- ☐ Ange exports Google Doc to PDF (File > Download > PDF Document) for submission.
- ☐ Ange (Team Leader only) fills in the official Team Participation Sheet separately.
- ☐ Final check: 3 files ready before deadline - Canva slides (PDF), Teamwork Report (PDF), Participation Sheet.

Important: grading is based on coding commits only. Merci, Joseph, and Luigi must each commit code directly from their own GitHub accounts so individual contributions are visible in the repository history. Writing this report does not count as a coding contribution.
