

Teamwork Report Task Division

AquaTrack Rwanda - Teamwork & Project Management Report

Tasks are divided so every member has a meaningful contribution. The report is drafted in a shared Google Doc. Each owner writes their section directly in the doc with screenshots. Ange exports the final version to PDF for submission.

Task Assignments at a Glance

Member	Role	Report Sections
Ange Umukundwa	Project Manager & UI/UX Lead	Project Management Tools + Figma designs + Compile
Merci Dieu Ndekwe	Lead Developer & Database Architect	Database design & schema
Luigi Birasa Ntore	Research Lead & Literature Reviewer	Team Collaboration (writing) + Backend/API implementation
Joseph Enitan Oke	Frontend Developer & QA Lead	Frontend implementation + GitHub repository

1. Project Management Tools - Owner: Ange

Task	Action
Identify tool used	Name GitHub Projects as the project management tool and state when the team started using it.
Explain how it supports the team	3-4 sentences: how columns (To Do / In Progress / Done) track tasks, support collaboration, and allow progress monitoring across all 4 members.
Capture screenshot	Screenshot of the live board showing real task cards (not empty). At least one card per member should be visible.
Write section in Google Doc	Paste screenshot with a caption explaining which sprint/phase it shows and who owns which cards.

2. Team Collaboration - Owner: Luigi (writing) + Ange (screenshots)

Task	Owner	Action
Collect meeting screenshots	Ange	Screenshot of at least 1 team meeting (video call, chat, or in-person) with date and attendees visible.
Write meeting captions	Luigi	1-2 sentences per screenshot: date, who attended, key decisions made.
Write collaboration practices	Luigi	Paragraph describing: Git branching workflow, Google Docs for report drafting, Canva for slides, and the day-to-day communication channel used by the team.
Attendance requirement	All	Every member must appear in at least one meeting screenshot or chat thread.

3. Progress Documentation

Sub-section	Owner	Evidence to Gather
Figma designs (with link)	Ange	Accessible Figma share-link + screenshot of citizen and WASAC dashboard wireframes. Note: Figma is required in this report only, not in the slide presentation.
Database design & schema	Merci	ERD screenshot covering all 5 tables (households, meter_readings, anomaly_alerts, citizen_reports, sms_notifications) + written explanation of key relationships.
Frontend implementation (HTML / CSS / JavaScript)	Joseph	Screenshots of the built HTML/CSS/JS pages: citizen dashboard (usage, bill forecast, issue submission) and WASAC dashboard (alerts, reports, trends). State what is functional vs still in progress.
Backend/API implementation	Luigi	Screenshot of the backend project structure (modules/apps folder) and a sample API response (e.g. anomaly alert JSON). Also include the data simulation script showing how realistic meter readings are generated for 50+ households.
GitHub repository	Joseph	Screenshot of the commit history showing commits from multiple members and the contributors tab confirming individual coding contributions.

4. Compilation Checklist - Owner: Ange

- [] Ange creates the shared Google Doc and shares the link with all 4 members.
- [] Luigi writes: Team Collaboration captions + collaboration practices paragraph + Backend/API implementation section.
- [] Joseph writes: Frontend implementation section + GitHub repository section.
- [] Luigi writes: Backend/API implementation section (Django structure + data simulation script).
- [] Ange writes: Project Management Tools section + Figma designs section.
- [] Ange reviews the full doc: every screenshot has a caption and all links are accessible.
- [] Ange exports Google Doc to PDF (File > Download > PDF Document) for submission.
- [] Ange (Team Leader only) fills in the official Team Participation Sheet separately.
- [] Final check: 3 files ready before deadline: Canva slides (PDF), Teamwork Report (PDF), Participation Sheet.

Important: grading is based on coding commits only. Merci, Joseph, and Luigi must each commit code directly from their own GitHub accounts so contributions are visible in the repository history. Writing this report does not count as a coding contribution.
